41st Conference on

Our World in Concrete & Structures

24-26 August 2016 – Singapore

Introduction

In a paper entitled "Advancements in Concrete Technology" published in Concrete International in June 1999, Professor P K Mehta opined that in addition to speed of construction and durability, environmental friendliness is the third force driving technology advancement in concrete construction. More than 15 years have passed and this still rings true in our world of concrete and concrete structures. That continued advances in concrete is still being made is testament to the continued dominance of concrete in construction all over the globe. As the Our World in Concrete and Structures enters its fourth decade the organisers have decided that the most appropriate theme is **Advances in Concrete**.

You are invited to share and exchange experience in advances made in anything and everything in concrete and structures, especially in the areas of:

- 01- Concrete design & analysis for buildings & structures
- 02- Concrete mix design, quality control and production
- 03- Concrete technology, ready-mix, SCC, RCC
- 04- Concrete plant, equipment and machinery
- 05- Concrete repairs and rehabilitation
- 06- Concrete materials, composites
- 07- Concrete construction and safety
- 08- Concrete application in roads, bridges, tall buildings, tunnels, underwater, underground, etc

OWICS16 is also very special as we are dedicating it to Mr. Yogesh Chhabra for his support of this conference series and for his acknowledged contributions to concrete and structures. He will deliver the OWICS16 Conference lecture.

Assoc. Professor K.C. Gary Ong
Conference Chairperson
National University of Singapore

We invite you to join us in this annual OWICS event, since 1976, and meet 'people that matters in concrete'.
